Compasses Engineering & Project development, part of **CompassesWorld**, is a magazine that aims to illustrate and disseminate the most interesting and innovative engineering projects under construction or recently completed at an international level. The main objective is to enhance the contribution of the various actors who contribute to engineering projects that currently stand out in the world for their innovative strength and for the use of the most advanced technological systems. The main focus is dedicated to civil engineering, which remains the leading sector, but gradually its gaze to all the other fields of engineering with a more innovative character. Attention is paid to the Middle East, a geographical area in tumultuous growth where there is currently the highest concentration of engineering.

The different projects are illustrated starting from a robust iconographic apparatus, such as to allow the reader to have a plastic vision of what is being made, of how the technical details become tangible reality. The high-quality images are accompanied by data sheets and indepth analyses that: illustrate the concrete execution of the engineering work on site; they tell the story of individual projects through plans, elevations and sections, construction details; illustrate the

use of highly innovative materials and systems. If the images and details of the individual projects represent the heart of the magazine, the more journalistic part develops around them with editorials, interviews with the protagonists, in-depth spaces dedicated to the activity of the design studios, products and their applications, and the most significant news on the latest technological and design developments in the sector at an international level.

The target

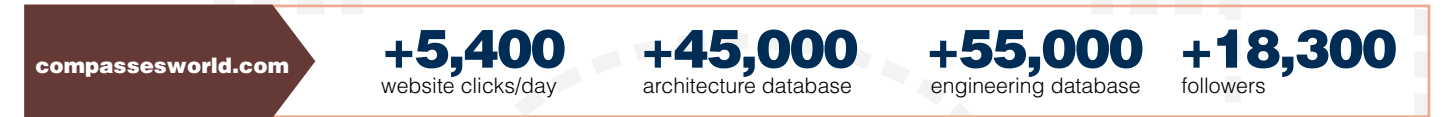

The sections

- [editorial]** The main topic of the issue is presented and discussed by the scientific director
- [focus]** A focus article on engineering and urban planning of the MENA region related to the main topic of the issue
- [engineering & plan]** A total of 8-10 designs, both engineering and urban scale, of reputable international engineers are presented with pictures, renderings, sketches, graphs, comments
- [experiences]** This section is exclusively dedicated to engineering projects completed or under construction in the countries of MENA Region
- [academia]** This section is devoted to publishing and diffusing top quality works produced by young talents within the universities of the MENA region and abroad
- [events & fairs]** This section is devoted to the major exhibitions and conferences held in the MENA
- [people & projects]** A showcase for the business community to present their new proposals and projects
- [ideas & trends]** A showcase for the business community to present their new proposals and projects
- [engineering & products]** A showcase for the business community to present their new proposals and projects

Info

Frequency: quarterly + 2/4 special issues per year
 Language: English
 Size: 21x28 cm
 Foliation: 96 pages
 Distribution: international, with particular concentration in UAE, Qatar, Lebanon, Saudi Arabia, Oman
 Calendar: **CE Magazine**
 issue 01 april 2025
 issue 02 july 2025
 issue 03 october 2025
CE+
 Special Issue BIG5 November 2025

Compasses Plus is the light version of **Compasses Magazine Engineering & Project development Magazine**. Cplus is an opportunity to further spread the influence of the magazine within its wide network of engineers, architects, academics and final year university students, master schools, contractors and public firms. The issue presents a brief panorama of the main construction and infrastructural projects under construction or in the portfolio of the GCC countries development plans. Each project will be presented according to the high editorial standards of the magazine and, from time to time, additional information such as sketches, prospects, renderings, in addition to credits and high quality photos (when possible) will be added. Furthermore, the issue is also a relevant source of information for those who are interested in the general construction scene of the entire Middle East. The magazine will provide an in depth look at the construction industry as well as a brief on the most reliable forecasts regarding the construction industry in the Area as a whole. Charts and graphics will make this special issue easy reading. Compasses Plus in a print version is distributed for free during the main engineering events of the area and sent digitally to all our database.

The sections

An editorial by our director about the Event and the design international scene
An interview with the Event Director
An interview to a prime engineers of the area
articles Compasses
People & project section
Ideas&trends and engineering & products from the market
